SUMMARY

Master of Information Technology student at the University of Auckland with a focus on AI, programming, full-stack development, and data-driven applications. Background in Business Analytics with hands-on experience in Python, Java, SQL, R, machine learning, and web development. Built practical projects including a multi-merchant ecommerce platform, a real-time study room booking system, and a machine learning analysis tool for video game sales. Interested in applying AI, software engineering, and analytics to build useful, scalable, and user-focused products.

TECHNICAL SKILLS

Programming Languages: Python, Java, SQL, R, JavaScript, HTML, CSS

Full-Stack Development: Spring Boot, Spring MVC, REST APIs, Vue 3, Vite, Node.js, Express

Databases: MySQL, H2, SQL queries, data modelling, CRUD operations

AI and Data: Machine Learning, Regression, Logistic Regression, K-Means Clustering, Data Cleaning, Data Visualisation

Tools: Git, GitHub, Docker, Maven, Excel, Pandas, NumPy, Scikit-learn

PROJECTS

NovaCart Multi-Merchant Ecommerce Platform

2026

Full-Stack Web Application

Java, Spring Boot, Vue 3, MySQL, Docker

Built a production-style ecommerce website builder where merchants can create, customise, manage, and publish online stores.

Developed backend REST APIs with Spring Boot, MySQL persistence, JPA entities, DTO validation, service-layer logic, and JWT-protected admin features.

Implemented frontend platform pages, merchant onboarding, admin dashboard, product management, order workflows, inventory, promotions, analytics, and generated storefront routes using Vue 3.

Structured the project with separate backend, frontend, documentation, Docker configuration, and development guides.

Study Room Booking System

2026

Real-Time Reservation Interface

Vue 3, Vite, JavaScript, HTML, CSS

Created a campus-style study computer booking demo that allows users to check live workstation availability and reserve available devices.

Designed an interactive visual room map with device states, reservation confirmation, cancellation flow, filters, and recent activity log.

Built a responsive interface with a booking entry page, live status dashboard, workstation summary, and user reservation panel.

Video Game Sales Machine Learning Analysis

2025

Machine Learning and Data Analysis Project

Python, Pandas, Scikit-learn, Jupyter Notebook

Reproduced and upgraded a machine learning project analysing video game sales performance using a structured and reusable Python workflow.

Cleaned and processed more than 6,000 video game records, handled missing values, validated schema, and generated reusable analysis outputs.

Applied linear regression, logistic regression, KNN regression, and K-Means clustering to explore sales patterns and business insights.

Exported charts, model metrics, cluster tables, and Markdown reports for clear communication of findings.

EDUCATION

University of Auckland

Master of Information Technology, AI and Software Development Focus

Auckland, New Zealand

Feb 2026 – Present

University of Auckland

Bachelor of Commerce in Business Analytics

Auckland, New Zealand

Jul 2022 – May 2026
